Impact Estimation Tables

- A tool, within 'Planguage'
 - ('Competitive Engineering' book)
- For Analysing *any* set of Ends and Means
- At any level
 - Or set of levels
- In any class of system
 - Including Business Analysis, and Architecture

Impact Estimation Concepts

Value Decision Tables: a type of Impact Estimation Table

Impact Estimation Table for Gates GCE Project

Key Values	Designs / Actions								Total Impact	Safety Factor
	Detailed risk assessment with associated impact estimation table for methods of mitigation	Research trip to madagascar (x3)	Detailed design research	Building financial models at community level	Research into existing sanitation projects	Creation of knowledge 'database'	Codification of our acquired knowledge	etc....		
	Impact (% progress towards target from given action)									
Improve Sanitation Target: 25% - 75% Unit: Waste collected / waste produced by user group	10	20	40	18	15	0	0		103	1.03
Sustainability and Longevity Target: 0\$ - 0\$ Unit: Cost to single user per month	0	5	20	50	10	0	0		85	0.85
Story and Data Target: 0.4 - 0.8 Unit: Average of factors rated 0.0 – 1.0	5	35	20	15	3	15	5		98	0.98
Managing Risk Target: 0.2 – 0.8 Unit: Average of factors rated 0.0 – 1.0	50	20	20	15	15	0	3		123	1.23
Methodology Target: 0.4 – 0.8 Unit: Average of factors rated 0.0 – 1.0	15	0	0	0	0	0	10		25	0.25
Diffusing Knowledge Target 0.15 – 0.8 Unit: Average of factors rated 0.0 – 1.0	0	8	0	0	10	50	15		83	0.83
Total impact of design / action	80	88	100	98	53	65	33	0		
Total cost of design / action (person days)	8	30	20	15	5	15	4	0		
Benefit to cost ratio	10	2.9	5.0	6.5	10.6	4.3	8.3	####		

The Principles of Impact Estimation

- 1. The Principle of 'Words being difficult to weigh'

Non-numeric estimates of impact are difficult to analyze and improve upon. A design idea described as 'excellent' could actually be worse than another merely described as 'good.'

- 2. The Principle of 'Doubtful digits are better than none'

A bad numeric estimate, and its definition, can still be systematically criticized and improved. In fact, a random number is a better starting estimate than flowery, descriptive words.

- 3. The 'Evident' Principle

Estimates without sources, evidence and credibility are not evident.

- 4. The Principle of 'Uncertainty in no uncertain terms'

The uncertainty estimate is at least as important as the main estimate.

- 5. The Principle of the 'Seat Belt'

A safety margin is as necessary with uncertain estimates, as a seat belt is with uncertain traffic.

- 6. The Principle of 'Profitable Proposals'

The value of an idea is how well it meets objectives. The net value considers the costs too.

- 7. The Principle of 'the Swiss Army Knife'

Impact Estimation is a multi-purpose method. It can help you in many situations: to evaluate, to compare, to present, to argue, to destroy, to find weaknesses, to cut fat, to see risk, to prioritize, to sequence and more.

- 8. The Principle of 'Always Useful'

Impact Estimation can assist a project throughout its lifecycle – from identifying requirements to assessing feedback data from implemented systems.

- 9. The Principle of 'Multiplicity'

When stakeholders have multiple requirements, then we need to evaluate multiple design options against all those requirements including considerations of value, in order to make a reasonable choice.

- 10. The Efficiency Principle

When real life has many stakeholder values, and many cost constraints, then evaluation of designs (strategies) must be done with respect to both the values and the costs.

- 1. The Principle of ‘Words being difficult to weigh’
- Non-numeric estimates of impact
 - are difficult to analyze and improve upon.
 - A design idea described as ‘excellent’
 - could actually be *worse* than another
 - merely described as ‘good.’

extend	end-to-end	interfaces

- 2. The Principle of 'Doubtful digits are better than none'

- A bad numeric estimate, and its definition,
 - can still be systematically criticized and improved.
- In fact, a random number is a better starting estimate
 - than flowery, descriptive words.

I think it is 60% \pm 20%

We have 3 data points
58% 65% and 85%

5 Data points in OUR
industry are
65%, 68% and 72%

Our initial measures of
early project value delivery
cycles are 80% to 82%

- 3. The 'Evident' Principle

- Estimates without
 - sources, evidence and credibility
 - are not evident.

"Facts are stubborn things; and whatever may be our wishes, our inclinations, or the dictates of our passions, they cannot alter the state of facts and evidence." -- John Adams

The Data Elements for one IE Cell

- Design X:
- Description: x....x
- Impacts: Usability
- Impact: 20 minutes
- Impact %: 50%
- Uncertainty: $\pm 40\%$
- Evidence: Saves 12 to 28 m.
- Source: Report XYZ, pp 33-35
- Credibility: 0.7 (we measured))

Cell Data

Evidence for estimates

"Results from
Project ABC"

Source of the Evidence

"Project
post mortem"

Credibility of the estimates

0.6

Credibility (of **Evidence and Source!**)
Rating Scale (CE p.274, fig. 93.)

Credibility Rating	Meaning
0.0	Wild guess, no credibility
0.1	We know it has been done somewhere
0.2	We have one measurement somewhere
0.3	There are several measurements in the estimated range
0.4	The measurements are relevant to our case
0.5	The method of measurement is considered reliable
0.6	We have used the method in-house
0.7	We have reliable measurements in-house
0.8	Reliable in-house measurements correlate to independent external measureme
0.9	We have used the idea on this project and measured it
1.0	Perfect credibility, we have rock solid, contract- guaranteed, long-term, credible experience with this idea on this project and, the results are unlikely to disappear

Acer Project (Bank Security)

Impact Estimation Table

Strategies	Identify Binding Compliance Requirements Strategy	System Control Strategy	System Implementation Strategy	Find Services That Meet Our Goals Strategy	Use The Lowest Cost Provider Strategy
Goals					
Security Administration Compliance 25% ➔ 90%	100%	100%	100%	50%	0%
Security Administration Performance 24 hrs ➔ 4 hrs	75%	100%	100%	100%	0%
Security Administration Availability 10 hrs ➔ 24 hrs	0%	0%	0%	100%	0%
Security Administration Cost 100% ➔ 60%	50%	100%	100%	100%	100%
Total Percentage Impact	225%	300%	300%	350%	100%
Evidence	ISAG Gap Analysis Oct-03	John Collins	John Collins	John Collins	John Collins
Cost to Implement Strategy	15 man days (US\$ 5,550)	15 man days (US\$ 5,550)	15 man days (US\$ 5,550)	15 man days (US\$ 5,550)	1man day (US\$ 1,110)
Credibility	0.9	0.6	0.6	0.75	0.9
Cost Adjusted Percentage Impact	202.5%	180%	180%	262.5%	90%

Evidence

- It has been said that man is a rational animal.
- All my life I have been searching for evidence which could support this.
- Bertrand Russell

Evidence

- The most savage controversies are those about matters as to which there is no good evidence either way.
—Bertrand Russell

- 4. The Principle of 'Uncertainty in no uncertain terms'

- The uncertainty estimate is
 - at least as important
 - as the main estimate.

IE Calculations Example:

Uncertainty Spread \pm ?

Attribute Tag	0% Ref- erence Point	100% PLAN or MUST	IDEA-1	IDEA-2	\pm Sum (10.)	Impact Sum (9.)	Safety Factor 'Two' Difference (11.)
RELIABILITY	300 hrs.	3000 hrs.	50% \pm 0	20% \pm 80	\pm 80	70%	-130% *
USABILITY	20 mins.	10 mins.	10% \pm 40	60% \pm 90	\pm 130	70%	-130% *
= Sum Qualities			60	80			* 200% minus column (9.)
CAPITAL	0	1 mill.	50% \pm 20	10% \pm 20	\pm 40	60%	-10% **
MAINTENANCE	1 mill/year	100,000 per yr.	0 \pm 20	100% \pm 80	\pm 100	100%	-50% **
= Sum Costs			50	110			** 50% minus column (9.)
Quality/cost ratio			1.2 (60/50)	0.73 (80/110)			

5. The Principle of the 'Seat Belt'

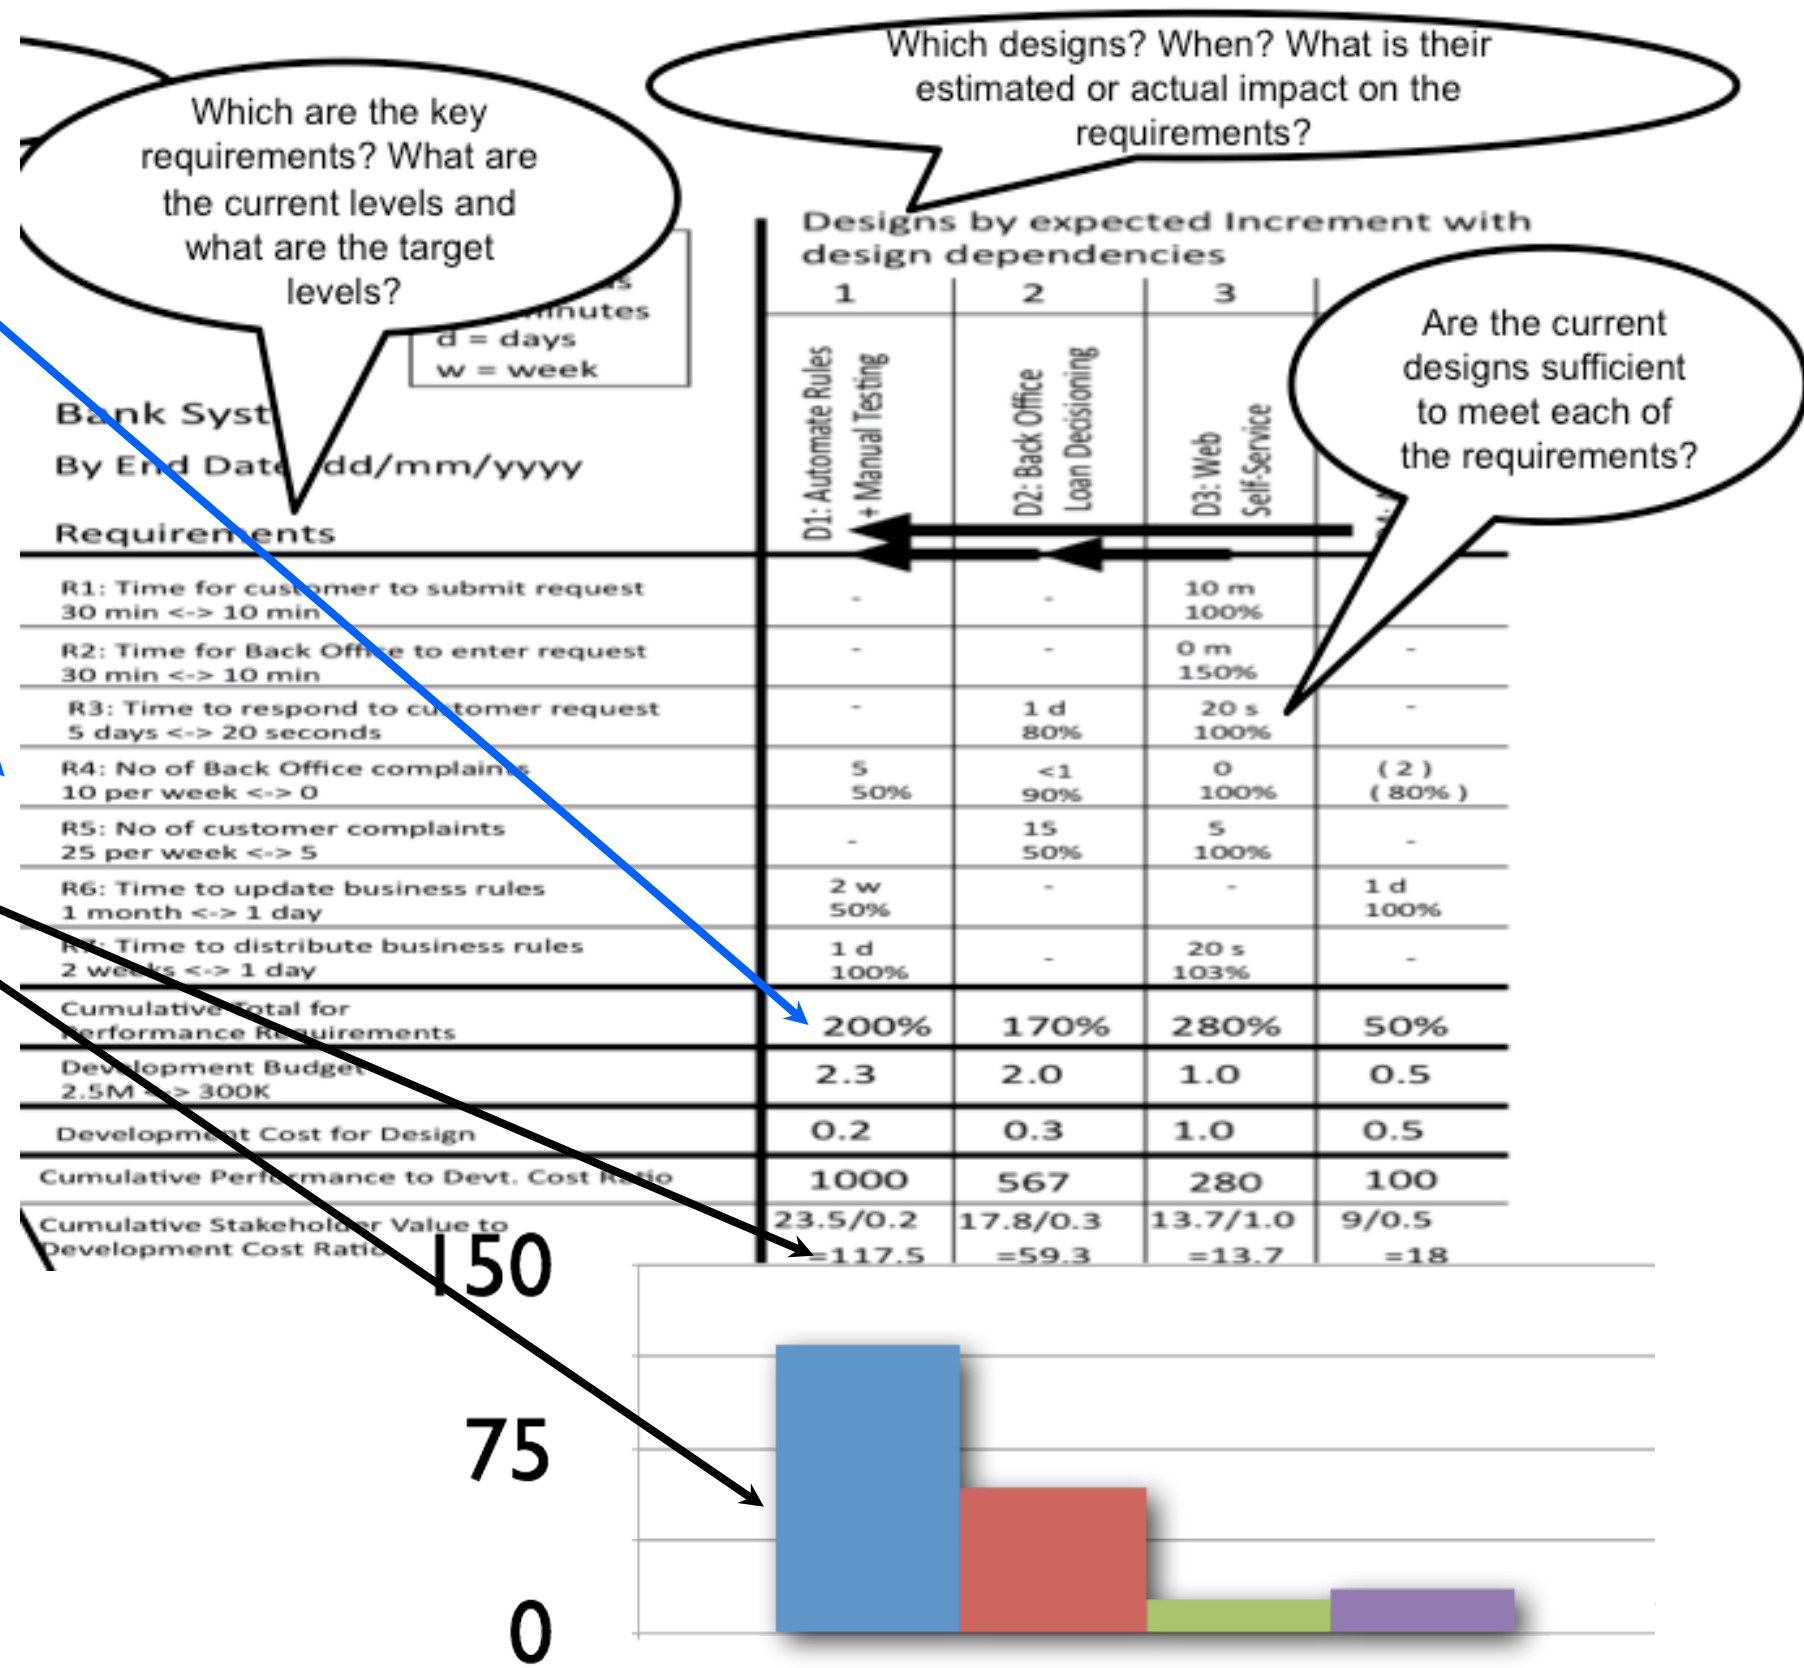

- A safety margin
 - is as necessary with uncertain estimates,
 - as a seat belt is with uncertain traffic.

	Designs / Actions								Total Impact	Safety Factor
	Detailed risk assessment with associated impact estimation table for methods of mitigation	Research trip to madagascar (x3)	Detailed design research	Building financial models at community level	Research into existing sanitation projects	Creation of knowledge 'database'	Codification of our acquired knowledge	etc....		
Key Values	Impact (% progress towards target from given action)									
Improve Sanitation Target: 25% - 75% Unit: Waste collected / waste produced by user group	10	20	40	18	15	0	0		103	1.03
Sustainability and Longevity Target: 0\$ - 0\$ Unit: Cost to single user per month	0	5	20	50	10	0	0		85	0.85
Story and Data Target: 0.4 - 0.8 Unit: Average of factors rated 0.0 – 1.0	5	35	20	15	3	15	5		98	0.98
Managing Risk Target: 0.2 – 0.8 Unit: Average of factors rated 0.0 – 1.0	50	20	20	15	15	0	3		123	1.23
Methodology Target: 0.4 – 0.8 Unit: Average of factors rated 0.0 – 1.0	15	0	0	0	0	0	10		25	0.25
Diffusing Knowledge Target 0.15 – 0.8 Unit: Average of factors rated 0.0 – 1.0	0	8	0	0	10	50	15		83	0.83
Total impact of design / action	80	88	100	98	53	65	33	0		
Total cost of design / action (person days)	8	30	20	15	5	15	4	0		
Benefit to cost ratio	10	2.9	5.0	6.5	10.6	4.3	8.3	####		

• 6. The Principle of 'Profitable Proposals'

- The value of an idea is how well it meets objectives.
- The net value considers the costs too.

• 7. The Principle of ‘the Swiss Army Knife’

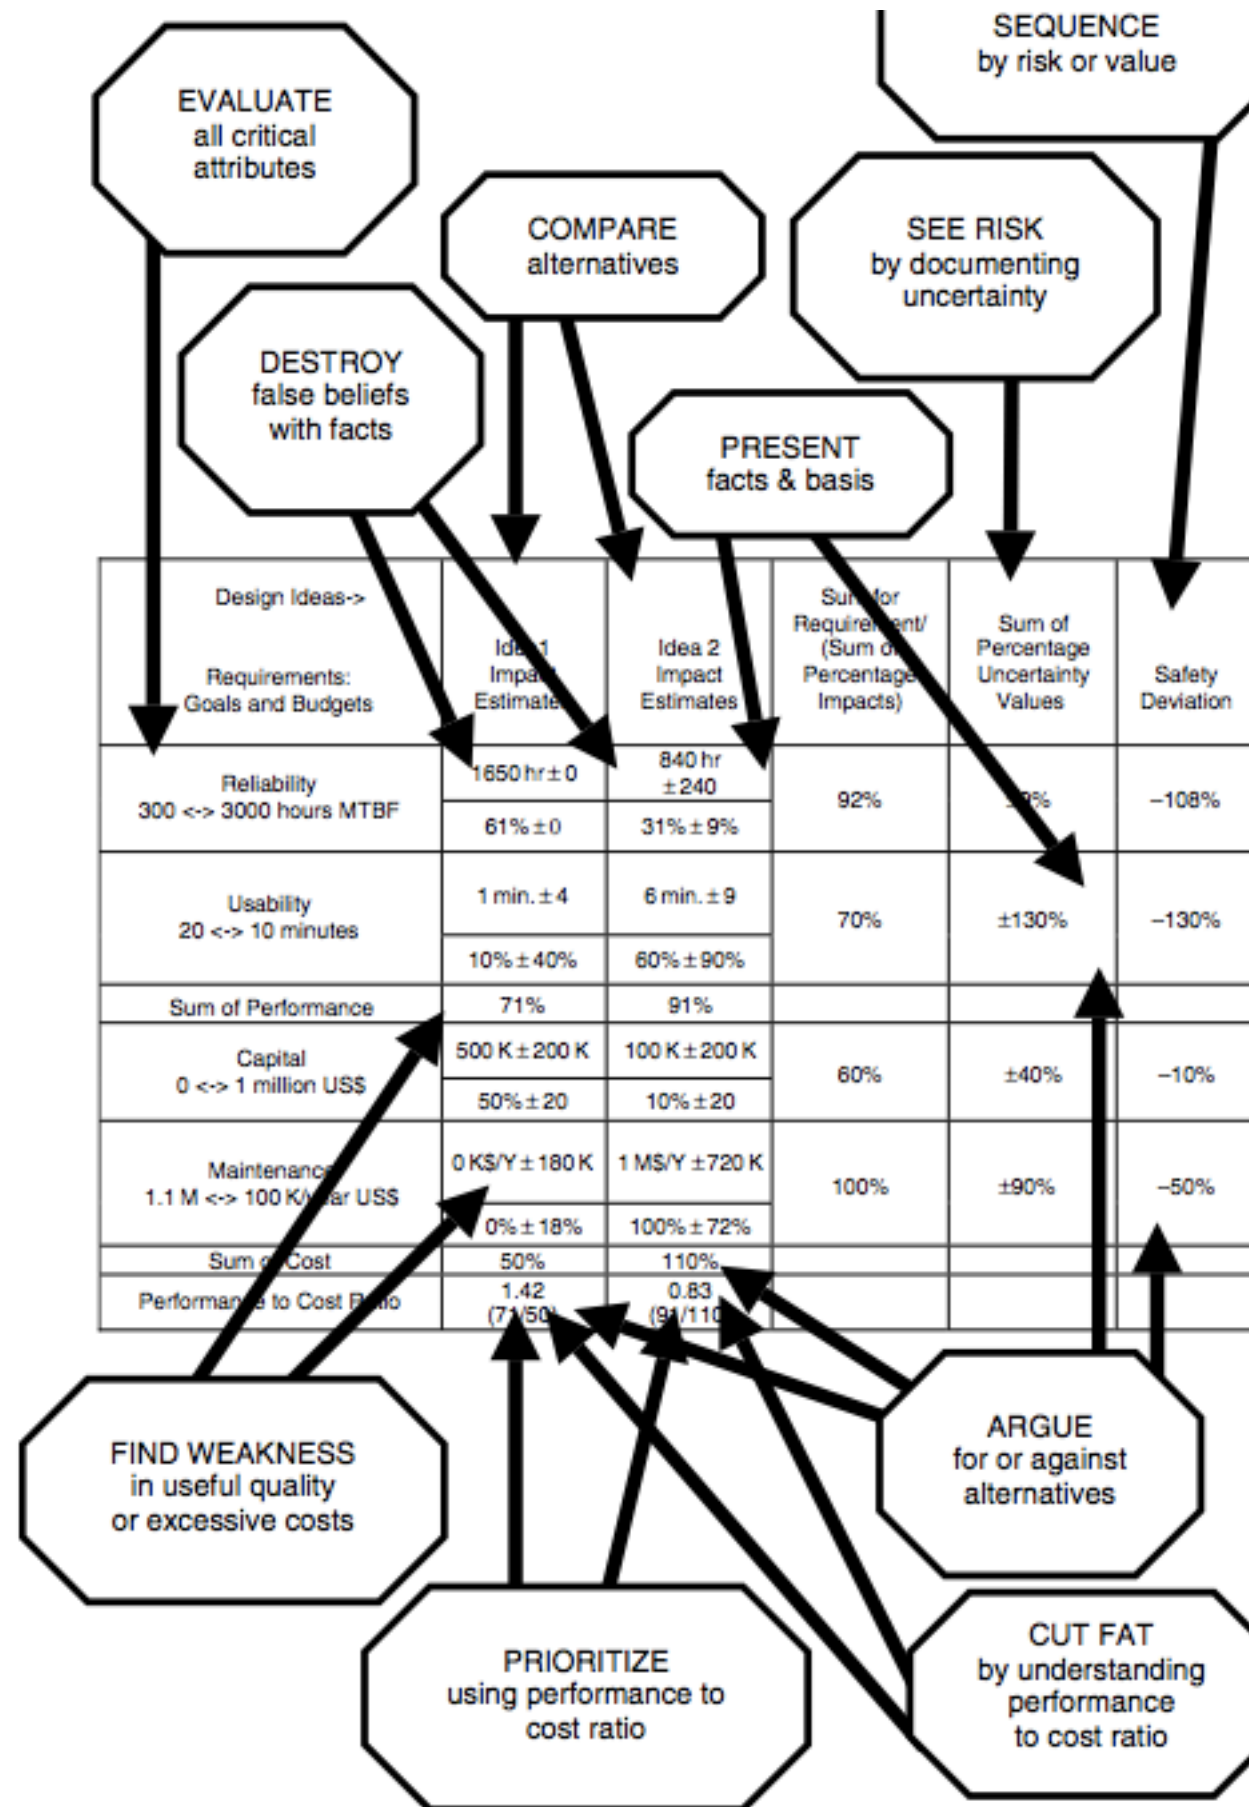

- Impact Estimation is a multi-purpose method.
- It can help you in many situations:
 - to evaluate,
 - to compare,
 - to present,
 - to argue,
 - to destroy,
 - to find weaknesses,
 - to cut fat,
 - to see risk,
 - to prioritize,
 - to sequence
 - and more.
